

Agricultural, forestry, groundcare & horticultural machinery from Lamberhurst Engineering

Lamberhurst Engineering Limited was set up by Andrew Fuller and Nigel Osborne in May 1997 when the proprietor of their previous employer Lamberhurst Equipment Limited, retired from the machinery trade after some 20 plus years of trading. The subtle change in company name allowed trading to continue uninterrupted.

In the UK, Lamberhurst Engineering Limited imports and distributes Ferrari and Holder Tractors, Seppi and Berti Agricultural and Forestry Mulching/Mulchers, Malfos ditching machines, Pellenc Vineyard tools and equipment, Caffini sprayers and is the Kent and East Sussex dealer for Same and Lamborghini Tractors.

The Company offers a range of equipment to mount to the tractors by all the well-known machinery manufacturers and also specialises in Stihl Chainsaws, Brushcutters and Hedge trimmers, and Tree surgery equipment together with all the necessary safety clothing required.

The workshops are fully equipped to tackle mechanical breakdowns, welding and servicing of all makes of Agricultural, Forestry and Horticultural machinery, either in house or on site with our factory-trained engineers. By keeping overheads low and profit margins tight the Company strives to offer its customers the best value for money along with a personal service so often found missing from larger companies.

Take a look at the new Seppi Machines

Hugely Successful Seppi International Demo Day Held in Italy

This was the first time in Seppi's 71 year history that dealers from all over the world have been invited as one group to attend the factory for their annual conference & training programme.

Seppi groundcare and forestry distributors from across the world recently visited the company's Head Quarters for their annual conference & training programme in what was to be the largest gathering of Seppi distributors ever held. Nearly 100 people from 30 countries descended on the picturesque area next to the Seppi factory in Caldaro, South Tyrol, Italy.

A large selection of Seppi products was on show with working demonstrations being held across the two day event. The demonstration

areas were shown in two different working conditions - one of the many orchards in the area and a wooded area that was being redeveloped into a vineyard. All participants were very satisfied with the machines shown and could see a growing and motivated company.

"The annual event was a huge success," commented Barbara Seppi, Marketing Manager at Seppi. "It was held to notify all of our distributors of the new developments which we are currently undertaking as well as training our dealers on how best to

work with our machinery".

This was the first time in Seppi's 71 year history that dealers from all over the world have been invited as one group to attend the factory and the whole two day event has proved such a success, that next year's event is already being planned.

The full range of Seppi mulchers are on sale in the UK exclusively from Lamberhurst Engineering. For more information, please contact 01892 890 364 or visit the website on www.lameng.com

The New Seppi Star FC combines three machines into one very heavy duty head that is designed to be fitted to excavators from 15 - 35 tonnes and to take up to 300 hp.

Three new machines are launched into the UK by Seppi and exclusively available from Lamberhurst Engineering.

Three New Environmental Machines Available from Seppi

Three brand new products from Italian manufacturer Seppi are now available in the UK, exclusively from Lamberhurst Engineering, the UK's sole importer.

The Seppi SMO XTR with side discharge is the first machine and is a standard SMO mower with an additional hydraulic drive endless belt cross conveyor fitted to the rear of the mower to take cut grass to the right side and deposit it under trees and vines. The retention of moisture for trees and vines is of great importance to all involved in the growing of these crops, so depositing the grass clippings under the crop both helps retain moisture and to suppress weeds.

The drive for this is taken from the external supply of the tractor. Although this concept is not new to Seppi - they made this type of machine many years ago, its re-launch is very pertinent in this age of environmental awareness.

The second machine, the XSA in-row weeder, is offered in three configurations:

- One unit on a three point linkage frame
- Two units on a three point linkage frame
- A single unit mounted on the side of an SMO mower.

The weeder units are free to float up and down, or if greater adjustment is needed hydraulic angling can be fitted. The breakaway is controlled by a sensitive touch bar. This operates with a spring release or optional hydraulic breakaway. The depth is controlled by a disc under the blades. The width of the complete unit is adjustable hydraulically with hydraulic power being supplied by an independent hydraulic system which is pto driven.

The third machine to be launched is the standard SMO XTR which has been designed to mow and weed simultaneously. The weeder is available in two widths 35cm [13.8"] and 45cm [17.7"]. Working depth is 4cm [1.6"]. A disc on the base of the mower limits the penetration so that root damage is avoided. The weeder is fitted to the right side of the mower.

Seppi's UK distributor is Lamberhurst Engineering. For more information call 01892 890364 or visit www.lameng.com.

New Machine from Seppi Proves to be a Star

The drive to do more with less and to do it better has never been as keen as it is today. For many years Seppi have made a large range of mulching heads for excavators and in more recent years they have diversified into stump grinders and stone crushers.

The New Seppi Star FC combines these machines into one very heavy duty head that is designed to be fitted to excavators from 15 - 35 tonnes and to take up to 300 hp.

The Star FC is designed to grind stumps up to 40 cm (16"), crush stones up to 15 cm (6"), destroy roots to a depth of 30 cm (12"), till the soil to a depth of 30 cm (12") to prepare for new planting, mulch unwanted vegetation up to 40 cm (16") and resurface stone tracks or roads.

There are three widths available 60 cm (24") 75 cm (30") and 100 cm (39"). The 60 cm and the 75 cm models are driven by one hydraulic motor and the 100 cm model by two.

Depending on the type of work being carried out, the oil flow for the single motor models should be between 120 litres and 200 litres. The double drive 100 model requires 240 litres to 400 litres.

The lower oil flow would be used for subsurface work and stones, the higher flow for above ground work and general mulching.

Seppi's UK distributor is Lamberhurst Engineering. For more information call 01892 890364 or visit www.lameng.com.

Forestry Machinery & Equipment

Importers and Distributors of Ferrari Tractors, Seppi Forestry Mulchers, Maxwold Cable Winches and FSI Stump Cutters
